# Executive Administration Manual

Welcome to the Chewe Technologies Executive portal. This manual provides detailed instructions on how to govern your institution, manage security policies, and interpret advanced analytics.

Chewe Technologies (pvt) LTD

# 1. Student Roster & Enrollment Management

In the interest of institutional security, Chewe Technologies utilizes a strict "Invite-Only" access protocol. Students and parents cannot simply create accounts and access school data. You, as the Executive, hold the keys.

## How to Securely Enroll a Student

Once a student has been physically registered at your administration office and their account created in the database, you must assign them to a classroom:

- 1. Navigate to the **Student Roster** module on your dashboard.
- 2. Locate the unassigned student in the datatable.
- 3. Click the **Assign** button associated with their row.
- 4. A secure modal will appear. Select the correct destination ClassRoom from the verified dropdown list.
- 5. Click **Confirm Assignment**. The system will automatically map the student to all relevant subjects and courses tied to that classroom.

# 2. The Analytics Engine

The Analytics Engine is your central command center for institutional health. It aggregates millions of data points from teacher input into legible, actionable metrics.

## Understanding Z-Scores

Rather than just looking at raw percentages, the system calculates a global Z-Score. A Z-score indicates how far above or below the historical average your student body is performing. A steady or rising Z-score indicates effective teaching methodologies.

## Topic Bottlenecks Chart

The system dynamically scans all recorded assessments. If the average score for a specific subject (e.g., "Advanced Biology") falls below 60%, it is automatically flagged on your dashboard as a "Bottleneck", allowing you to intervene and allocate more teaching resources.

## AI Executive Advisor

You do not need to analyze the data alone. By clicking "Generate AI Insight", the system sends your live metrics to our secure OpenRouter AI pipeline, which will return a professionally synthesized briefing of your school's performance.
